

The diagram illustrates the formula for a z-score. It features three main components with arrows pointing to their respective parts in the formula:

- Observed Score** (blue text): An arrow points to the variable X in the numerator.
- Population Mean** (teal text): Labeled as $\mu = 100$, an arrow points to the variable μ in the numerator.
- Population Standard Deviation** (green text): Labeled as $\sigma = 15$, an arrow points to the variable σ in the denominator.

The **z-score** (purple text) is indicated by an arrow pointing to the variable z on the left side of the equation.

$$z = \frac{X - \mu}{\sigma}$$
